DETAILED ACTION

Information Disclosure Statement

The examiner has considered the items listed on the Information Disclosure Statement (IDS) filed 4/15/04. With regard to the Non-Patent literature item Chen et al listed under "Other Documents", a readable copy has been provided by the examiner and placed in the file. A signed copy of Form PTO-1449 is included with this office action, but an annotation is inserted to correctly identify said Non-Patent Literature item.

Specification

The disclosure is objected to because of the following informalities: throughout the specification the wording "dopant" should be replaced by "dopant"; also, the wording "IIIE" on line 21 of page should be replaced by "34th Annual Proceedings of the IEEE International Symposium on Reliability Physics, pages 327-232, 1996". Appropriate correction is required.

Claim Objections

- 1. *Claims 32-38* are objected to because of the following informalities: the wording "dopant" should be replaced by "dopant" (claim 32, lines 4, 6, 7, 12 and 15; claim 33, line 2, 4 and 5). Appropriate correction is required.
- Claims 32-38 are objected to because of the following informalities: the wording "regions:" (final line of claim 32) should be replaced by: "regions.".
 Appropriate correction is required.

Application/Control Number: 10/791,022 Page 3

Art Unit: 2826

3. *Claim* 33 is objected to because of the following informalities: the wording: "said plurality of spaced third regions of n type dopant" should be replaced by: "said plurality of third regions". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 34 is rejected under 35 U.S.C. 112, second paragraph, as being
indefinite for failing to particularly point out and distinctly claim the subject
matter which applicant regards as the invention.

In particular, the adjective "alternating" in "alternating array" does not pertain to any feature of an array as such but instead requires specification of at least two different arrays to which alternating can be defined.

- Claim 34 recites the limitation "said laterally spaced pluralities of third emitter regions" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.
- 3. *Claim 35* recites the limitation "said collector regions" in line 1. There is insufficient antecedent basis for this limitation in the claim.
- 4. *Claim 36* recites the limitation "said array" in line 1. There is insufficient antecedent basis for this limitation in the claim.
- 5. Regarding *claim* 37, the phrase "box like" renders the claim indefinite because the claim includes elements not actually disclosed (those

Application/Control Number: 10/791,022 Page 4

Art Unit: 2826

encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

- 6. *Claim 38* recites the limitation "said plurality of second semiconductor base region electrical contact conductor elements" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.
- 7. **Claim 38** recites the limitation "said third semiconductor emitter region base region electrical contact conductor elements" in lines 2-3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
 - 1. Claims 32-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al (5,850,095) (made of record by Applicant in IDS filed).

Chen et al teach an integrated vertical multiple npn transistor ESD protection structure on a semiconductor substrate 42 (col. 3, I. 35-36) (title and abstract; Figure 4 and cols. 2-4), functionally connected between an integrated circuit input or output pin 34 (col. 3, I. 5) and ground (indicated in Figure 4) which will prevent electrostatic discharge damage to said integrated circuit comprising;

Application/Control Number: 10/791,022

Art Unit: 2826

a first semiconductor layer 44 (col. 3, I. 35) having a first conductivity dopant type (N-type);

a second semiconductor layer 46 (col. 3, I. 40-42) overlying said first semiconductor layer, having a similar conductivity type as said first layer, but a different dopant concentration (N instead of N+);

a third semiconductor layer 62 (col. 3, I. 62) having a second conductivity dopant type opposite that of said first semiconductor layer (P-type), disposed in overlying relation to said second semiconductor layer (cf. Fig. 4);

a plurality of first regions 50 of said first conductivity type (N-type) electrically connecting with said first semiconductor layer, having a top element 58 making electrical contact to said first regions and said first semiconductor layer (col. 3, I. 55-59);

a plurality of second regions 64 (col. 3, I. 63) of said second conductivity dopant type (P-type) laterally spaced from said first regions (cf. Fig. 4), being electrically connected to said third semiconductor layer having a top element 76 making electrical contact to said second regions and said second semiconductor layer (see Figure 4);

a plurality of third regions 66 of said first semiconductor layer conductivity dopant type (N-type) laterally spaced and interposed between said second regions. In conclusion, Chen et al anticipate claim 32.

On claim 33: the plurality of first regions 50 together with the associated connected first semiconductor layer are with n dopant and form multiple collector elements of a bipolar transistor in which the bases are formed by said third conductivity

Application/Control Number: 10/791,022

Art Unit: 2826

layer 62 and associated said plurality of second regions of p dopant, and by which multiple emitter elements are formed by said plurality of laterally spaced third regions 66 of n type dopant (cf. Figure 4: N.B. 65 are the emitter contacts (col. 3, I. 64)).

On claim 34: This rejection is offered subject to the indefiniteness noted under 35 U.S.C. 112, second paragraph, above. Examiner will here assume that the alternation is between emitter regions and the material of the layer ("third semiconductor layer") 62 in which said emitter regions are located. Then the further limitation so interpreted is met by Chen et al because laterally spaced pluralities of emitter regions 66 are arranged in an alternating array within said third semiconductor base layer, with "N" number of emitter regions whereby "N" corresponds to (i.e., defines) the number of multiple bipolar transistors in an electrically parallel transistor array that comprise said ESD protection structure.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Canclini (5,341,005) (made of record by Applicant in IDS), showing inter alia horizontal contact conductor stripes for collector, emitter and base regions (front figure); Beigel (cols. 2-5, title, abstract and Figure 3).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Johannes P. Mondt whose telephone number is 571-272-1919. The examiner can normally be reached on 8:00 - 18:00.

Application/Control Number: 10/791,022 Page 7

Art Unit: 2826

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan J. Flynn can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
